

## ***FX3F, FX3T, FX4T Bike Rack***

### **Additional Instructions:**

1/ Ensure your bike frame is securely enclosed between the plates with no room for movement during transport.

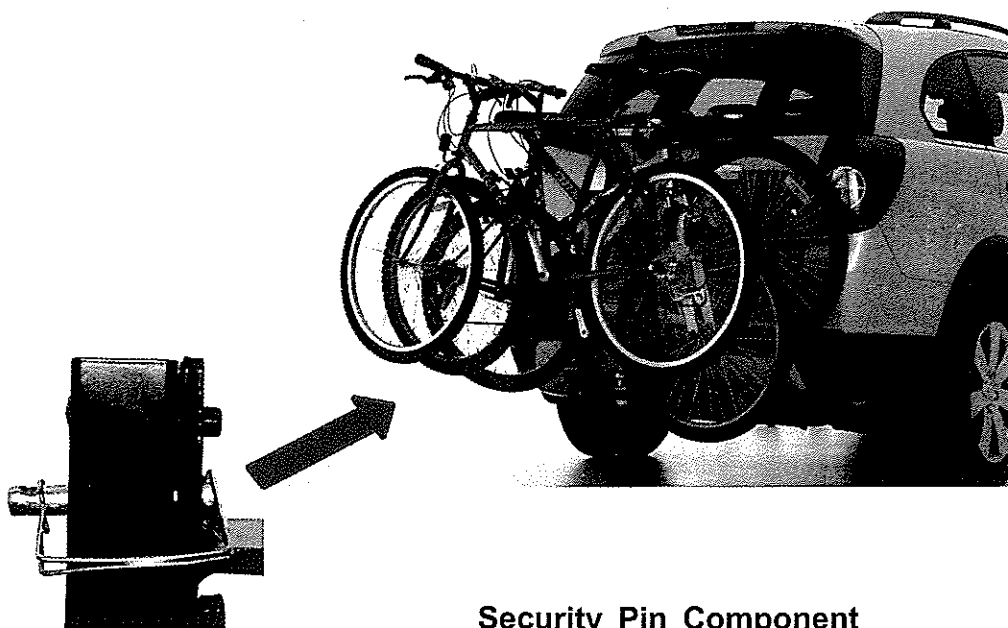

**a/ This may mean that some shapes of bike frames are not suitable for this bike rack due to possible movement during transportation of bikes.**

**b/ This means that only same shapes of bike frames should be mounted due to possible movement during transportation of bikes, e.g. All round or all oval profile bike frames at once.**

It is required to strap the base of the bikes to your bike rack to avoid excess movement & leverage of bikes during transport. Regularly check and tighten all fittings which may come loose.

2/ Ensure the Security Pin provided in the tilt models is securely fixed into place at all times during use of bike transportation as shown below.

**Note: Security Pin is only applied for FX3T and FX4T**

**Security Pin Component**
